Saturday, May 19th 2018

10am - 2pm

Hepatitis C Risk

Factors:

- Born Between 1945-1965
- Received Donated blood or organs before 1992
- Have EVER injected drugs, even if it was only once, many years ago
- Have certain medical conditions such as chronic liver disease and HIV or AIDS
- Have abnormal liver tests or liver disease
- Have been exposed to blood from a person who has Hepatitis C
- Are on Hemodialysis
- Are born to mother with Hepatitis C

Symptoms of Hepatitis C

Many people with Hepatitis C do not have symptoms and do not know they are infected. If symptoms occur they can include: fever, feeling tired, not wanting to eat, upset stomach, throwing up, dark urine, gray-colored stool, joint pain, and yellow skin and eyes.

What is Hepatitis C?

Hepatitis C is an infection caused by a virus that attacks the liver and leads to inflammation, liver disease, liver failure and even liver cancer. The virus is spread by contact with contaminated blood, for example, from sharing needles or from unsterile tattoo equipment.
